

## PSWID SECRETARIES REPORT FOR MARCH 25, 2021

There are two things that I want to report on:

- 1) I have it on good authority that SRP plans to only pump water from the CC Cragin reservoir for six weeks this year. Payson is confident about their water supply for this year, but is concerned about future years if the reservoir doesn't refill. In connection with this, there are still CC Cragin water rights available. The board directed our past district manager to secure these water rights, and I will pursue this issue, as it wasn't done.
- 2) As chairman of the water enhancement committee, I have started inquiries on a presently inoperable well which has been tentatively offered to PSWID. This well is apparently owned by several persons, and their permission is being sought before any transfer could occur. A further complication is that there is mention made in DWR documents of a (?past?) connection to Strawberry Hollow. This would greatly complicate any transfer. I will continue to pursue this, and will bring it before the committee if the ability to gain ownership of the well occurs.
